Infertility rates are at an all-time high, leading to a great demand for assisted reproductive services. *In vitro* fertilisation (IVF) is the most common and successful form of assisted reproductive technology (ART).

In the IVF lab, embryologists are faced with the need to embrace cutting-edge technology, while managing quality control and ensure seamless operational processes. To address these challenges, embryologists must continuously equip themselves with the appropriate skills to stay relevant.

This CPD is designed as a timely platform to introduce new insights and cutting-edge expertise through an exploration of up-to-date protocols, technology, challenges, quality control and assurance associated with the *in vitro* handling of human oocytes, sperm, and embryos.

Expert speakers from industry and academia will enrich our understanding of the complex science of clinical embryology and provide valuable information to improve practice and inspire further learning. The event also intends to benefit participants from various levels of proficiency, from undergraduate students to veteran laboratory scientists. As part of the continuum of an annual lecture series, we strive to cover essential, up-to-date topics in medical laboratory science and provide quality professional training for participants.

### OBJECTIVES

- To support lifelong learning and career development of laboratory scientists
- To enhance essential knowledge and skills in the field of clinical embryology among participants
